EPAT/ Radial Shockwave, aka Acoustic or Pressure Wave

EPAT Shockwave aka Pressure or Medical Wave, by Storz Medical, Swiss-Made

It is a non-invasive, highly effective treatment method for pain that promotes accelerated repair of injured soft tissue and bone, including heel and joint pain.

This is done by introducing high energy sound waves into the painful areas of the body. These high energy acoustic sound waves stimulate the metabolism and circulation and actually jump-start a **REGENERATIVE** process via growth factors and stem cells mobilization, especially helpful in the treatment of difficult to heal tissues like tendons as in tendonitis. 91 % success rate in clinical studies. Short treatments delivering long-lasting regenerative results!

Benefits:

- Non-invasive
- No anesthesia required
- No side effects
- No risk of infections
- No scarring
- Highly effective

Treatable Conditions:

- Shoulder pain/tendonitis/bursitis
- Plantar fasciitis, Achilles, foot, ankle pain
- Back, and neck pain/strain
- Scar tissue, adhesions
- Hamstring, calf pain, and strain
- Stress fracture

Class IV Deep Tissue Laser Therapy by LightForce Medical, FXi Model

Class IV Laser Therapy generates a photochemical response in damaged tissues by a process called **PHOTOBIO-MODULATION**.

This process stimulates healing on a cellular level by enabling cells to more rapidly produce energy (ATP). This significantly reduces pain and inflammation. Treatments are fast 4 to 10 min. on average, safe, pleasant and effective. Results often felt after one treatment, but the majority of people will get excellent results after receiving 5 to 8 sessions, 2 x a week, preferably.

Class IV Laser Therapy allows for deeper tissue penetration resulting in more efficient and consistent results.
